**CSE0001 – Digital Literacy Project Report Digital Literacy Portfolio Student Project**

**Submitted By: Name:** Aniruddha Majumdar

**Registration Number:** 25BAI10749

**Branch:** B.Tech Artificial Intelligence

**Year:** First Year

**Course Code:** CSE0001

**Course Title:** Digital Literacy

**University:** VIT Bhopal University

**Date:** March 2026

---

**Introduction**

As a first-year B.Tech student at VIT Bhopal University, I was selected as a Student Digital Ambassador. My role is to guide my batchmates in navigating the digital world responsibly. This project is a complete Digital Literacy Portfolio that covers all five modules of the CSE0001 course.

I created a professional GitHub repository named "Digital-Literacy" that contains an infographic, profile screenshots, coding proofs, email drafts, checklists, and this full report. Through these five tasks, I learned how to create awareness content, build a professional online presence, use collaboration tools, practice proper email etiquette, and protect myself from cybercrimes. This project not only fulfils the course requirement but also serves as my permanent digital portfolio that I can share with faculty and future employers.

---

**Task 1: Create a Digital Literacy Awareness Infographic**

**Tool used:** Canva (canva.com)

For this task, I created a one-page infographic titled **"Digital Literacy: Your Key to the Online World"** and saved it as Understanding Digital Literacy.png inside the task-1presentation/ folder.

The design covers three important topics:

1. What Digital Literacy is (ability to find, evaluate, create and share information safely).
2. Core skills required (critical thinking, online research, privacy protection).

3. Why it matters in 2026 (better studies, future jobs, avoiding scams & fake news) and useful tools like Canva.

I found designing the layout and choosing the right colours and icons very interesting. The only difficulty I faced was balancing text and visuals so that it remains easy to read for first-year students. Overall, this task helped me understand how visual communication can make complex ideas simple and engaging.

---

**Task 2: Build Your Student Digital Portfolio**

I set up accounts on three platforms: **GitHub**, **LinkedIn**, and **Kaggle**.

- **GitHub** – I created a profile README repository with my name, branch, year, and a line about learning digital skills.
- **LinkedIn** – I filled the Education section with my current B.Tech Artificial Intelligence degree at VIT Bhopal University (expected graduation 2029).
- **Kaggle** – I created a profile for data-science related learning.

Screenshots of all three profiles are saved in the task-2-portfolio/ folder.

These platforms will help me in the next four years: GitHub for coding projects and open-source contributions, LinkedIn for internships and networking, and Kaggle for participating in data-science competitions. This task taught me the importance of maintaining a clean and professional digital footprint from the very beginning of college. **Files location:** task-2-portfolio/

---

**Task 3: Explore Coding & Collaboration Platforms**

**Part A – Coding Practice:** I chose **HackerRank**. I created an account and completed the beginner Python challenge "Solve Me First". Screenshots of the problem, solution, and result are saved in task-3-platforms/.

**Part B – Google Workspace (mandatory):** I created a **Digital Literacy Awareness Quiz** with exactly 5 questions (including one multiple-choice and one short-answer). The form link is shared in my README.md. Screenshots of the Google Form and the linked Google Sheet (response view) are also in the same folder.

These tools will help me academically by allowing me to practise coding regularly on HackerRank and to create quick surveys or quizzes for group projects using Google Forms. This task gave me confidence to guide my classmates on useful study platforms. **Files location:** task-3-platforms/

---

**Task 4: Draft a Professional Email & Etiquette Guide**

I drafted two professional emails and saved them in the task-4-email-etiquette/ folder:

1. **Assignment Submission Deadline Extension** request to a professor.
2. **Summer Internship Opportunity** interest email to a company coordinator.

I also created a **Social Media Do's and Don'ts** checklist (6 Do's and 6 Don'ts) and saved it as Things to do on media.txt.

One real-life situation where poor digital communication caused problems is when a student sent an informal WhatsApp message to a professor asking for notes, which was perceived as disrespectful and led to a negative impression. Using proper email etiquette with clear subject lines, polite greetings, and correct sign-offs would have avoided this issue completely.

**Files location:** task-4-email-etiquette/

---

**Task 5: Cybercrime Awareness Case Study & Prevention Guide**

While researching cybercrimes, what surprised me the most was how common and sophisticated UPI frauds have become in India — even educated college students lose money every day.

As a result, I have decided to personally change one habit: **I will never share my UPI PIN or OTP with anyone and will always verify the beneficiary name before approving any payment**.

I created a realistic case study on UPI/Online Payment Fraud and a 10-point "Stay Safe Online" prevention checklist (with two specific UPI safety tips and the mandatory reporting channels: cybercrime.gov.in and Helpline 1930). Both files are saved in the task-5-cybercrime/ folder.

---

**Conclusion**

This Digital Literacy project has been a complete eye-opener. From creating an infographic on Canva to setting up professional profiles, practising coding on HackerRank, writing formal emails, and understanding cyber threats, I have gained practical skills that will stay with me throughout my college life and beyond.
I now feel more confident using technology safely and effectively. This repository will remain part of my permanent digital portfolio. I am grateful to VIT Bhopal University for this practical and useful assignment.
